

Get the Facts. Get Vaccinated.

COVID-19 vaccines are effective at helping protect against severe disease and death from variants of the virus that causes COVID-19 currently circulating, including the Delta variant. Even if you've already had COVID-19, you should still get vaccinated.

The Centers for Disease Control and Prevention (CDC) recently announced that plans are currently in the works to begin offering COVID-19 booster shots this fall. The third booster shot offers long-term and stronger protection against the virus.

Here are just a few of the many benefits of getting the COVID-19 vaccine:

- Increased ability to socialize
- No mandatory quarantine when exposed
- Ability to visit family
- Feeling safe in public settings
- Protecting yourself and others in your community

All vaccinations are safe, effective and widely available. According to the CDC, 99.9% of vaccinated individuals do not get seriously sick if they contract COVID.

What We're Doing To Help

We're doing our part to help residents get vaccinated and limit the spread of COVID-19, including:

- Transportation to nearby vaccination sites
- Hosting vaccine clinics at our communities
- Ensuring all associates are fully vaccinated
- Following CDC and area guidelines on masks, symptom screenings and visits

Our No. 1 priority is keeping everyone in our community, both residents and associates, safe. We encourage you to get vaccinated.
